Thin Solid Films, *225* (1993) 301–304

Subject Index of Volume 225

Aluminium arsenide
  atomic layer epitaxy of AlAs and $Al_xGa_{1-x}As$ for device application, 109
  atomic layer epitaxy of AlAs and $(AlAs)_n(GaAs)_n$, 74
Aluminium oxide
  layered tantalum–aluminum oxide films deposited by atomic layer epitaxy, 296
Arsenic
  atomic layer doping for Si, 163
Atomic beam studies
  atomic H: a reagent for the extraction of chemical species from Si surfaces, 150
  atomic layer epitaxy of Si using atomic H, 168
  group IV atomic layer epitaxy, 145
Auger electron spectroscopy
  comparison of Cl_2 and HCl adsorption on Si(100) $-(2 \times 1)$, 140
  microscopic mechanisms of accurate layer-by-layer growth of β-SiC, 240

Cadmium selenide
  self-limiting monolayer epitaxy of wide gap II–VI superlattices, 270
Cadmium sulphide
  cost-effective processing by atomic layer epitaxy, 96
Cadmium telluride
  growth and characterization of CdTe, HgTe and HgCdTe by atomic layer epitaxy, 261
  growth and characterization of CdTe–ZnTe short-period superlattices, 265
  ultra high vacuum atomic layer epitaxy of CdTe, 250
Carbon
  atomic layer epitaxy of AlAs and $(AlAs)_n(GaAs)_n$, 74
  group IV atomic layer epitaxy, 145
Catalysis
  analytical and chemical techniques in the study of surface species in atomic layer epitaxy, 280
Chemical beam epitaxy
  laser-assisted atomic layer epitaxy of GaP in chemical beam epitaxy, 70
Chemical vapour deposition
  atomic layer doping for Si, 163
  atomic layer epitaxy for resonant tunneling devices, 99
  atomic layer epitaxy of 3C–SiC by low pressure vapour deposition with alternating gas supply, 230
  atomic layer epitaxy of AlAs and $Al_xGa_{1-x}As$ for device application, 109
GaAs/AlGaAs atomic layer epitaxy in a commercial MOCVD reactor, 105
  growth and characterization of CdTe, HgTe and HgCdTe by atomic layer epitaxy, 261
  silicon monolayer growth using dichlorosilane and hydrogen in a near atmospheric pressure chemical vapor deposition reactor, 183
  wavelength dependence of photoenhanced organometallic chemical vapor deposition, 91
Chemisorption
  novel method for chemical vapor deposition and atomic layer epitaxy using radical chemistry, 212

Diamond
  chemistry of hydrogen on diamond (100), 203
  novel method for chemical vapor deposition and atomic layer epitaxy using radical chemistry, 212
Diffusion
  conditions for light-induced short-time growth of GaAs and InP by chloride epitaxy, 86

Electron energy loss spectroscopy
  comparison of Cl_2 and HCl adsorption on Si(100) $-(2 \times 1)$, 140
  Si_2H_6 adsorption and dissociation pathways on Ge(001)2×1: mechanisms for heterogeneous atomic layer epitaxy, 191
Electronic devices
  Si heterojunction diodes with a thin β-SiC layer prepared with gas layer source molecular beam epitaxy, 235
Epitaxy
  self-limiting growth on zinc chalcogenides and their superlattices, 256
Etching
  atomic layer manipulation of III–V compounds, 120
  digital etching study and fabrication of fine Si lines and dots, 124
  dopants on Si(100) surfaces: useful probes of silicon atomic layer epitaxy?, 160
  surface processes in digital etching of GaAs, 136

Fourier transform infrared spectroscopy
  analytical and chemical techniques in the study of surface species in atomic layer epitaxy, 280

Gallium arsenide
  atomic layer epitaxy for resonant tunneling devices, 99
  atomic layer manipulation of III–V compounds, 120
  conditions for light-induced short-time growth of GaAs and InP by chloride epitaxy, 86
  GaAs/AlGaAs atomic layer epitaxy in a commercial MOCVD reactor, 105
  growth and characterization of device quality GaAs produced by laser-assisted atomic layer epitaxy using triethylgallium, 115
  in situ monitoring and control of atomic layer epitaxy by surface photo-absorption, 32
  in situ optical characterization of GaAs and InP surfaces during chloride atomic layer epitaxy, 47
  molecular layer epitaxy of GaAs, 1
  real-time optical diagnostics for measuring and controlling epitaxial growth, 26
  study of photocatalytic growth-rate enhancement in MOMBE of GaAs on ZnSe by surface photoabsorption, 78
  study of self-limiting growth mechanism in chloride ALE, 53
  study of surface reactions in atomic layer epitaxy of GaAs using trimethylgallium by reflectance difference spectroscopy and mass spectroscopy, 12
  surface chemistry and kinetics of GaAs atomic layer epitaxy, 17
  surface photo-absorption study of the laser-assisted atomic layer epitaxial growth process of GaAs, 40
  surface processes in digital etching of GaAs, 136
  wavelength dependence of photoenhanced organometallic chemical vapor deposition, 91

Gallium nitride
layer-by-layer epitaxial growth of GaN at low temperatures, 244
Gallium phosphide
laser-assisted atomic layer epitaxy of GaP in chemical beam epitaxy, 70
Gallium selenide
impact of short exposure times on the ALE self-limiting process: potential mechanisms, 59
Germanium
chemisorption and reaction of $GeCl_4$ with Si(100), 187

High energy electron diffraction
atomic layer control of the growth of oxide superconductors using laser molecular beam epitaxy, 275
atomic layer epitaxy controlled by surface superstructures in SiC, 225
self-limiting adsorption and in situ optical monitoring for atomic layer epitaxy of oxide superconductors, 284
Si atomic layer epitaxy based on Si_2H_6 and remote He plasma bombardment, 177
Si_2H_6 adsorption and dissociation pathways on Ge(001)2 × 1: mechanisms for heterogeneous atomic layer epitaxy, 191
ultra high vacuum atomic layer epitaxy of CdTe, 250
Hydrocarbons
hydrocarbon surface chemistry on Si(100), 196

Impurities
potential Si atomic layer epitaxy processes using halogenated Si precursors, 173
Indium arsenide
in situ monitoring and control of atomic layer epitaxy by surface photo-absorption, 32
Indium phosphide
atomic layer epitaxy of InP using trimethylindium and tertiarybutylphosphine, 64
conditions for light-induced short-time growth of GaAs and InP by chloride epitaxy, 86
determining lattice mismatch or the composition of a single ultra thin GaInAs layer grown in InP, 82
in situ monitoring and control of atomic layer epitaxy by surface photo-absorption, 32
in situ optical characterization of GaAs and InP surfaces during chloride atomic layer epitaxy, 47
Infrared spectroscopy
chemistry of hydrogen on diamond (100), 203
Ion bombardment
atomic layer manipulation of III–V compounds, 120
digital etching study and fabrication of fine Si lines and dots, 124

Laser ablation
atomic layer control of the growth of oxide superconductors using laser molecular beam epitaxy, 275
Laser irradiation
growth and characterization of device quality GaAs produced by laser-assisted atomic layer epitaxy using triethylgallium, 115
study of photocatalytic growth-rate enhancement in MOMBE of GaAs on ZnSe by surface photoabsorption, 78
surface photo-absorption study of the laser-assisted atomic layer epitaxial growth process of GaAs, 40
wavelength dependence of photoenhanced organometallic chemical vapor deposition, 91

Low energy electron diffraction
hydrocarbon surface chemistry on Si(100), 196
microscopic mechanisms of accurate layer-by-layer growth of β-SiC, 240
Luminescence
determining lattice mismatch or the composition of a single ultra thin GaInAs layer grown in InP, 82

Mecury telluride
growth and characterization of CdTe, HgTe and HgCdTe by atomic layer epitaxy, 261
Metal–organics
laser-assisted atomic layer epitaxy of GaP in chemical beam epitaxy, 70
Molecular beam epitaxy
atomic layer control of the growth of oxide superconductors using laser molecular beam epitaxy, 275
atomic layer epitaxy controlled by surface superstructures in SiC, 225
atomic layer epitaxy of Si using atomic H, 168
self-limiting growth on zinc chalcogenides and their superlattices, 256
Si heterojunction diodes with a thin β-SiC layer prepared with gas layer source molecular beam epitaxy, 235
Molecular beam studies
atomic H: a reagent for the extraction of chemical species from Si surfaces, 150
group IV atomic layer epitaxy, 145
Molybdenum
group IV atomic layer epitaxy, 145
Monolayers
atomic layer epitaxy for resonant tunneling devices, 99
atomic layer epitaxy of 3C–SiC by low pressure vapour deposition with alternating gas supply, 230
atomic layer epitaxy of AlAs and $Al_xGa_{1-x}As$ for device application, 109
atomic layer epitaxy of AlAs and $(AlAs)_n(GaAs)_n$, 74
atomic layer epitaxy of InP using trimethylindium and tertiarybutylphosphine, 64
atomic layer epitaxy of Si using atomic H, 168
atomic layer epitaxy: chemical opportunities and challenges, 130
atomic layer manipulation of III–V compounds, 120
chemisorption and reaction of $GeCl_4$ with Si(100), 187
cost-effective processing by atomic layer epitaxy, 96
dopants on Si(100) surfaces: useful probes of silicon atomic layer epitaxy?, 160
GaAs/AlGaAs atomic layer epitaxy in a commercial MOCVD reactor, 105
group IV atomic layer epitaxy, 145
growth and characterization of CdTe, HgTe and HgCdTe by atomic layer epitaxy, 261
growth and characterization of device quality GaAs produced by laser-assisted atomic layer epitaxy using triethylgallium, 115
impact of short exposure time on the ALE self-limiting process: potential mechanisms, 59
layer-by-layer epitaxial growth of GaN at low temperatures, 244
model for the atomic layer epitaxy of GaAs, 7
molecular layer epitaxy of GaAs, 1
potential Si atomic layer epitaxy processes using halogenated Si precursors, 173
real-time optical diagnostics for measuring and controlling epitaxial growth, 26

self-limiting monolayer epitaxy of wide gap II–VI superlattice, 270
Si atomic layer epitaxy based on Si_2H_6 and remote He plasma bombardment, 177
silicon monolayer growth using dichlorosilane and hydrogen in a near atmospheric pressure chemical vapor deposition reactor, 183
study of photocatalytic growth-rate enhancement in MOMBE of GaAs on ZnSe by surface photoabsorption, 78
study of self-limiting growth mechanism in chloride ALE, 53
study of surface reactions in atomic layer epitaxy of GaAs using trimethylgallium by reflectance difference spectroscopy and mass spectroscopy, 12
surface processes in digital etching of GaAs, 136
surface chemistry and kinetics of GaAs atomic layer epitaxy, 17
ultra high vacuum atomic layer epitaxy of CdTe, 250

Multilayers
atomic layer epitaxy: chemical opportunities and challenges, 130
layered tantalum–aluminum oxide films deposited by atomic layer epitaxy, 296

Nuclear magnetic resonance
analytical and chemical techniques in the study of surface species in atomic layer epitaxy, 280

Oxides
atomic layer control of the growth of oxide superconductors using laser molecular beam epitaxy, 275
atomic layer epitaxy: chemical opportunities and challenges, 130
self-limiting adsorption and in situ optical monitoring for atomic layer epitaxy of oxide superconductors, 284

Photo-processes
laser-assisted atomic layer epitaxy of GaP in chemical beam epitaxy, 70
Plasma processing and deposition
Si atomic layer epitaxy based on Si_2H_6 and remote He plasma bombardment, 177

Quantum effects
atomic layer epitaxy for resonant tunneling devices, 99
atomic layer epitaxy of AlAs and $Al_xGa_{1-x}As$ for device application, 109
determining lattice mismatch or the composition of a single ultra thin GaInAs layer grown in InP, 82

Raman scattering
novel method for chemical vapor deposition and atomic layer epitaxy using radical chemistry, 212
Reflection spectroscopy
in situ monitoring and control of atomic layer epitaxy by surface photo-absorption, 32
in situ optical characterization of GaAs and InP surfaces during chloride atomic layer epitaxy, 47
real-time optical diagnostics for measuring and controlling epitaxial growth, 26
study of surface reactions in atomic layer epitaxy of GaAs using trimethylgallium by reflectance difference spectroscopy and mass spectroscopy, 12
surface photo-absorption study of the laser-assisted atomic layer epitaxial growth process of GaAs, 40
Rutherford backscattering spectroscopy
growth of titanium dioxide thin films by atomic layer epitaxy, 288

Secondary ion mass spectrometry
growth and characterization of device quality GaAs produced by laser-assisted atomic layer epitaxy using triethylgallium, 115
Segregation
atomic layer doping for Si, 163
Semiconductors
layer-by-layer growth of SiC at low temperatures, 219
Silicon
atomic H: a reagent for the extraction of chemical species from Si surfaces, 150
atomic layer doping for Si, 163
atomic layer epitaxy of Si using atomic H, 168
comparison of Cl_2 and HCl adsorption on Si(100) – (2 × 1), 140
digital etching study and fabrication of fine Si lines and dots, 124
dopants on Si(100) surfaces: useful probes of silicon atomic layer epitaxy?, 160
hydrocarbon surface chemistry on Si(100), 196
Hydrogen–halogen chemistry on semiconductor surfaces, 155
potential Si atomic layer epitaxy processes using halogenated Si precursors, 173
Si atomic layer epitaxy based on Si_2H_6 and remote He plasma bombardment, 177
Si_2H_6 adsorption and dissociation pathways on Ge(001)2 × 1: mechanisms for heterogeneous atomic layer epitaxy, 191
silicon monolayer growth using dichlorosilane and hydrogen in a near atmospheric pressure chemical vapor deposition reactor, 183
Silicon carbide
atomic layer epitaxy controlled by surface superstructures in SiC, 225
atomic layer epitaxy of 3C–SiC by low pressure vapour deposition with alternating gas supply, 230
layer-by-layer growth of SiC at low temperatures, 219
microscopic mechanisms of accurate layer-by-layer growth of β-SiC, 240
Si heterojunction diodes with a thin β-SiC layer prepared with gas layer source molecular beam epitaxy, 235
Superconductivity
self-limiting adsorption and *in situ* optical monitoring for atomic layer epitaxy of oxide superconductors, 284
Superlattices
atomic layer epitaxy of AlAs and $(AlAs)_n(GaAs)_n$, 74
growth and characterization of CdTe–ZnTe short-period superlattices, 265
self-limiting growth on zinc chalcogenides and their superlattices, 256
self-limiting monolayer epitaxy of wide gap II–VI superlattices, 270
Surface composition
model for the atomic layer epitaxy of GaAs, 7
molecular layer epitaxy of GaAs, 1
silicon monolayer growth using dichlorosilane and hydrogen in a near atmospheric pressure chemical vapor deposition reactor, 183
surface chemistry and kinetics of GaAs atomic layer epitaxy, 17
Surface energy
hydrogen–halogen chemistry on semiconductor surfaces, 155

Surface processes
laser-assisted atomic layer epitaxy of GaP in chemical beam epitaxy, 70

Tantalum
layered tantalum–aluminum oxide films deposited by atomic layer epitaxy, 296
Thermal desorption
atomic H: a reagent for the extraction of chemical species from Si surfaces, 150
chemistry of hydrogen on diamond (100), 203
comparison of Cl_2 and HCl adsorption on Si(100) $-(2 \times 1)$, 140
hydrocarbon surface chemistry on Si(100), 196
hydrogen–halogen chemistry on semiconductor surfaces, 155
impact of short exposure time on the ALE self-limiting process: potential mechanisms, 59
model for the atomic layer epitaxy of GaAs, 7
study of self-limiting growth mechanism in chloride ALE, 53
surface chemistry and kinetics of GaAs atomic layer epitaxy, 17
Titanium oxide
cost-effective processing by atomic layer epitaxy, 96
growth of titanium dioxide thin films by atomic layer epitaxy, 288
Transmission electron microscopy
layer-by-layer epitaxial growth of GaN at low temperatures, 244

X-Ray diffraction
determining lattice mismatch or the composition of a single ultra thin GaInAs layer grown in InP, 82
growth and characterization of CdTe–ZnTe short-period superlattices, 265
growth of titanium dioxide thin films by atomic layer epitaxy, 288
self-limiting monolayer epitaxy of wide gap II–VI superlattice, 270
X-Ray photoelectron spectroscopy
atomic layer epitaxy of InP using trimethylindium and tertiarybutylphosphine, 64
chemisorption and reaction of $GeCl_4$ with Si(100), 187

Zinc selenides
study of photocatalytic growth-rate enhancement in MOMBE of GaAs on ZnSe by surface photoabsorption, 78
